Induced After-Death Communication: A New Therapy for Healing Grief and Trauma

Amazon Product Description: Induced After-Death Communication is a new therapy that has helped thousands of patients permanently assuage their grief by allowing them private communication with their departed loved ones. Botkin, a clinical psychologist, created the therapy while counseling Vietnam vets in his work at a North Chicago VA hospital. Induced After-Death Communication presents the story of how Botkin initially made his discovery and includes 84 cases of patients who have experienced the therapy's profound healing effects. After more than two decades as a clinical psychologist specializing in the treatment of Post-Traumatic Stress Disorder, Botkin founded the Center for Grief and Traumatic Loss.
